Key Features

FileXchange is a service that enables secure file transfer and collaboration between individuals and organizations. It provides a platform for users to share files securely, both internally and externally, without the need for email attachments or physical media. With FileXchange, users can upload files, set permissions and access controls, and send notifications to collaborators. FileXchange is commonly used by businesses, healthcare organizations, and government agencies for secure file exchange and collaboration.

Simple File Transfer

Simple large file and folder transfer

Password Protection

All files sent are password protected for security, shared links are set to expire.

Team Folders

All team folders are enforced with policy rules

On-Prem Integration

FileXchange can directly be integrated with Office and On-Prem.

Locally Mapped

FileXchange is locally mapped to cloud drives for fast sharing

Additional benefits

- ✓ Text based encrypted mail to internal users
- ✓ Send large files without eating mailbox space
- ✓ Secure the data you are sending
- ✓ Send encrypted internal mail user to user
- ✓ Easily manage who can view and who can edit your files
- ✓ Fast setup
- ✓ Zero-Day Threat Prevention

FileXchange can be installed onto both Windows and Mac devices. Once installed, FileXchange integrates into both the OS and MS Outlook, providing easy to use, secure sharing of files through the cloud. Notifications allow for file activity tracking across internal and external users, keeping you informed of views and downloads in real-time. FileXchange also provides organization logs to view the overall history of company activities.
